

Project Abstract:

This project develops an **Agentic AI-powered Autonomous Campaign System** that automates the outreach process. It identifies target organizations such as colleges, collects information from public sources and APIs, and generates personalized emails using AI. The system sends emails, tracks responses, performs automatic follow-ups, and provides campaign analytics. By reducing manual work, it saves time, improves efficiency, and enables large-scale personalized communication.

Who are the users and end users?

Users:

- Marketing teams
- Sales teams
- Business Development Executives

- Educational outreach coordinators
- Campaign administrators

End Users (People who receive the communication):

- Educational institutions (Schools, Colleges, Universities)
- Students
- Faculty members
- Company representatives

Whom are we targeting?

- Engineering/Degree Colleges
- universities
- Autonomous Institutes
- EIE, AI/ML, ECE Relevant branches
- training and placement Centres
- innovation incubation
- official faculty coordinators

What are the project features?

The project includes AI-based target discovery, automated data collection, personalized email generation, campaign management, intelligent follow-ups, response tracking, analytics dashboard, API integration, and Agentic AI-based autonomous automation.

Which agents do we need?

1. Supervisor
2. planning
3. routing
4. memory
5. policy
6. monitoring
7. college discovery
8. website scrolling
9. department detection
10. opportunity
11. contact-discovering
12. lead qualification (trainer profile)

- 13.content generator
- 14.personalization
- 15.campaign manager
- 16.CRM Management
- 17.follow up
- 18.analytics agents.

What is the end-to-end work flow?

Select States

Find Colleges

Analyze Official Website

Identify AI/ML/ECE/CS Departments

Generate Personalized Proposal (LLM)

Human Review & Approval

Send Outreach

Track Responses

Schedule Meeting
